THE ULTIMATE CHIMINEA

i-fire

THE ULTIMATE CHIMINEA

The 'i-fire' garden wood burner is a thoroughly novel and green answer to your outdoor heating requirements. Unlike standard gas burning patio heaters for example, which burn non-renewable fossil fuel with a very high carbon output, the 'i-fire' burns carbon neutral renewable fuel such as seasoned wood and biomass briquettes.

The burning of bio-fuel produces carbon dioxide which is a greenhouse gas, but bio-fuel is created using plants that soak up carbon dioxide from the atmosphere and produce oxygen instead – so the effect in theory, is to cancel out the greenhouse gas produced in burning.

Fuel and kindling is readily available from most garage forecourts and garden centres as well as many other local outlets. We recommend dry seasoned wood fuel products and biomass

fuels as these tend to burn cleanly with a minimum of smoke and few sparks. The sale of many of these fuels can have a direct and positive impact on our countryside and environment by supporting the people and organizations that manage our forestry, woodland and who contribute significantly to rural stewardship.

Designed and manufactured in Hampshire, the 'i-fire' is a superb example of British craftsmanship and ingenuity. Whether you run a public house with an outdoor seating area or simply love the contemporary look of the 'i-fire' and can't wait to invite friends and family round for a summer evening get together, you simply can't fail to provide a stunning focal point and fascinating topic of conversation.

www.i-fire.co.uk

- **A contemporary alternative to gas patio heating**
Not just outside heating but an attractive focal point for social gatherings. A perfect solution to the problem of highly environmentally harmful gas patio heaters.

- **Environmentally friendly**
Using carbon neutral wood fuel to support our countryside industries and to help protect the environment.

- **Unique design**
Combining the best of contemporary design and style with local manufacturing and traditional real fire comfort.

- **A taller flue for better draw**
Unlike other chimineas the taller flue draws the products of combustion upwards and away.
